## BOOK REVIEW

"A Century of Entomology in the Pacific Northwest," by Melville H. Hatch, University of Washington Press, Seattle 5. \$1.50.

In this little book of 43 pages Dr. Hatch has brought together for the first time the facts relating to the development of entomology in the States of Oregon, Washington and the Province of British Columbia. The work of assembling this information has obviously entailed considerable research and the author has succeeded very effectively in synchronizing the events leading to the gradual development of entomological work in the different parts of the Pacific Northwest.

The book is divided into five chapters dealing with periods of development; first, the period of itinerant collectors, then the period of resident collectors who laid the foundation of our entomological societies; then the period of established laboratories, showing the growth of applied entomology in this region from small beginnings to gradual broadening of the work in recent years. We regret that, in this chapter, mention has not been made of the names of Dr. W. H. Brittain and his assistant Mr. M. H. Ruhmann, the first entomologists to be appointed by the Government of

British Columbia. Dr. Brittain held the dual position of Provincial Entomologist and Plant Pathologist at Vernon from 1912 to 1913 when he resigned on accepting the post of Provincial Entomologist for Nova Scotia. Mr. Ruhmann was appointed assistant to Dr. Brittain in 1912 and, when the direction of entomological work was taken over by R. C. Treherne under the Dominion Government, after Dr. Brittain's departure, he continued in the position of Assistant Provincial Entomologist until his death in 1943.

In other respects we find that full recognition has been given to the work of British Columbia entomologists. Chapter four describes the expansion of entomological work from 1930 until the present time and a short chapter is devoted to enumeration and description of the insect collections in the Pacific Northwest. The book is illustrated with portraits of several noted men who played a prominent part in founding the structure of our present day entomological organizations and many facts of historical interest are recorded. For reference purposes Dr. Hatch's book will be of value and interesting to all who are presently engaged or who have taken part in entomological work in the Pacific Northwest.—W. Downes.
